Rahul Sahu

Frontend Developer

rs626719137@gmail.com | [Github↗] | [Portfolio live↗] | Umaria, Madhya Pradesh

PROFESSIONAL SUMMARY

Frontend Developer passionate about crafting clean, interactive web experiences. Backed by a solid understanding of **Java** and object-oriented programming, I have built a strong core foundation in Vanilla JavaScript and DOM manipulation through real-world projects. I am currently transitioning into **React** to build scalable, component-driven applications, while exploring **Node.js** to expand my full-stack capabilities.

TECHNICAL SKILLS

HTML5 CSS3 (Glassmorphism, Responsive Design) JavaScript (ES6+, DOM, Async/Await)

Fetch API AI-Assisted Development (Cursor, Prompt Engineering) Git / GitHub

FEATURED PROJECTS

Data Collection App (Panchayat Digitalization) [View Live ↗] Deployed: Sep 2026

HTML, CSS, JavaScript, LocalStorage, Vercel

- **Solved a Critical Data Bottleneck:** Replaced the local Panchayat's inefficient physical diaries with a digital application, utilizing the **LocalStorage API** for reliable, zero-latency client-side data persistence.
- **Engineered Instant Search:** Built a custom filtering engine using Vanilla JS and DOM manipulation, reducing citizen data retrieval time from minutes of manual page-flipping to instant query results.
- **Real-World Deployment:** Hosted on Vercel, empowering local administrators to seamlessly add, manage, and extract community details on demand without the overhead of complex backend infrastructure.

Movie Explorer App [View Live ↗] 2026

Vanilla JavaScript, TMDB API, Async/Await, CSS Grid

- **Engineered a Dynamic Search Engine:** Captured real-time user input to construct parameterized TMDB API queries, instantly parsing JSON responses to render specific cinematic data without page reloads.

- **Optimized Client-Side UI State:** Built a robust interface that manages dynamic DOM updates and gracefully handles edge cases like empty search queries or missing image assets.
- **Responsive UI Architecture:** Designed a mobile-first, grid-based layout utilizing modern CSS techniques to maintain a premium, accessible browsing experience across all devices.

Frontend Micro-Applications

2025 - 2026

Vanilla JavaScript, DOM Manipulation, LocalStorage

- **State Management & Utilities:** Engineered a suite of interactive UI components, including a Task Manager (CRUD operations), Notes architecture, and a real-time Digital Clock.
- **Authentication UI Flows:** Designed and implemented Login/Signup interfaces with client-side form validation to ensure secure and structured user data entry.

EDUCATION

Bachelor of Science (B.Sc.) — Computer Science (Honors)

Present (4th Year)

Pandit S.N. Shukla University
